

Kunqi Lin builds across research, AI products, and real users.

Economics, Rank 1/227

SCI Q2 Co-first Author

National Scholarship

AI Product Builder

Founder & Creator

I am an economics undergraduate who treats AI as both a research object and a practical tool. My strongest work sits at the intersection of quantitative research, AI-assisted product building, content entrepreneurship, and community operations.

3.98

GPA / 4.0, top of major

SCI Q2

Published energy economics paper

5,000+

Followers for AI personal brand

3,000+

Day-one opens for campus product

01. Research from question to publication

Built an empirical study on critical mineral trade networks and NEV industry growth, linking economics, sustainability, and complex network analysis.

02. AI competition into usable solution

Worked on a low-resource language test generation system, connecting model capability with education scenarios and commercialization design.

03. AI creator brand from zero to traction

Built content workflows, audience growth, paid community logic, and external partnerships including Tencent IMA and an AI-focused MCN.

04. Small products, fast iteration, real users

Launched a campus mini-program, built feedback communities, explored merchant collaboration, and used AI coding to ship personal web products.

Core portfolio thesis: I do not only study technology adoption; I build small systems that let people actually use new technology.

Guangzhou, Guangdong, China

Published research on critical minerals, trade networks, and the NEV industry.

SCI Q2 | CO-FIRST AUTHOR

This project shows my ability to turn a broad sustainability problem into a testable economic research design.

PUBLICATION EVIDENCE

How trading patterns of critical minerals affects the NEV industry?
A complex network and multiple regression analysis approach

Energy for Sustainable Development
Volume 85, 2025, Article 101655
DOI: 10.1016/j.esd.2025.101655
Role: Co-first Author, student contributor

Research focus: how critical mineral trade network positions influence new energy vehicle industry development through technological progress.

METHOD VISUAL

Question

Do global critical mineral trade positions affect the growth of the NEV industry?

Approach

Constructed a 2013-2023 trade network and used econometric models to test mechanisms.

Finding

Trade centrality promotes NEV industry development, with technological progress as a full mediator.

MY CONTRIBUTION

- Participated in the complete research cycle: literature review, hypothesis development, variable design, empirical testing, and manuscript revision.
- Processed global trade data and translated an industry problem into measurable network indicators.
- Strengthened my ability to combine economic theory, data analysis, and sustainability policy questions.

SKILLS DEMONSTRATED

- Complex network analysis and quantitative research design.
- Econometric modeling, robustness thinking, and scientific writing.
- Cross-domain thinking across energy transition, trade, and industrial innovation.

AI-powered low-resource language test generation system.

NATIONAL GOLD | INTERNATIONAL BRONZE

From a real education shortage to a productized AI system, this project demonstrates my product framing, business design, and interdisciplinary teamwork.

1

User Pain

Teachers lack high-quality assessment materials for low-resource languages such as Lao, Burmese, and Khmer.

2

AI System

Generated questions, evaluated difficulty, and supported standardized test paper construction.

3

Product Logic

Applied Item Response Theory to make question difficulty more measurable and controllable.

4

Business Model

Designed a three-part commercialization route: individual users, institutional clients, and data services.

COMPETITION RESULT

Gold

National award in Asia Pacific ICT Competition

Bronze

International competition result in Brunei

81%

Reported model accuracy for low-resource languages

RMB 130K

Projected first-year revenue from 2 enterprise clients

MY ROLE

- Led product and commercialization thinking for the team: user scenarios, value proposition, pricing logic, and presentation structure.
- Translated technical capability into an education solution that judges could understand and users could imagine using.
- Helped connect the prototype with institutional demand, including GDUFS School of East Asian Languages.
- Practiced international communication under pressure during the competition process.

WHAT THIS PROVES

I am strongest when technical teams need someone to connect model capability with a real user problem, a convincing product narrative, and a feasible commercialization route. This is the same ability I hope to deepen at Red Bird: crossing boundaries between technology, market, and social need.

Built a personal AI brand and shipped my own web presence with AI-assisted development.

FOUNDER & CREATOR

This is the most direct evidence of my zero-to-one execution: content, product, audience, and workflow all built by doing.

WEBSITE SCREENSHOT

Personal website: kunkiporfolio.site, built as a public entry point for articles, projects, and student-oriented AI resources.

BRAND METRICS

5,000+

Followers across WeChat Video Channel, Official Account, and Douyin

75%

Content production time reduction through human-AI workflows

2

External partnership signals: Tencent IMA campus partner and AI-focused MCN contract

COMMERCIALIZATION FUNNEL

Free content: public AI learning and tool demos

Paid community: structured guidance and peer support

High-ticket consulting: practical AI adoption help

SKILLS DEMONSTRATED

- Identified a real user gap: many non-technical creators know AI matters but lack practical ways to use it.
- Designed repeatable content workflows with local knowledge bases and AI agents.
- Used AI-assisted web development to ship a personal site, not just describe an idea.

WeChat Video Channel

Public evidence of the AI creator brand and content distribution channel.

Mini-Program QR

Product evidence for the campus decision tool shown on the next page.

Small products, real users, fast feedback loops.

PRODUCT & GROWTH

This page gathers the projects that show my practical execution beyond papers and competitions: product launch, community operations, ecosystem design, and public communication.

"CHISHA!" CAMPUS MINI-PROGRAM

- Defined the core user problem: students waste attention deciding what to eat every day.
- Led product strategy, launch messaging, community feedback, and merchant collaboration.
- Initial launch reached 500+ users and 3,000+ opens on day one, with a 147-member user community.
- Used an approachable product personality to make the tool feel light, local, and shareable.

AUTOMATION TOOLS

- Xiaohongshu viral note generator: converts topic keywords into structured note drafts.
- WeChat Official Account auto-formatter: improves publication consistency through automated typography.
- These tools support my own creator workflow and help others lower the barrier to content production.

OPC ECOSYSTEM

LEADERSHIP & SPEAKING

- Canton Fair VIP reception team leader: managed 16 volunteers serving 1,000+ international VIP buyers daily, with zero complaints.
- Guangzhou AI Creator Salon speaker: shared practical frameworks for local knowledge bases, AI agents, and individual competitiveness.
- These experiences trained me to communicate clearly with both technical and non-technical audiences.

Why this portfolio fits Red Bird.

SUMMARY

My strongest pattern is not one isolated achievement. It is the ability to move between rigorous analysis, AI-enabled making, business reality, and human-centered communication.

Academic Depth

Published SCI Q2 research, top academic ranking, and quantitative training in economics give me the discipline to ask precise questions and test claims carefully.

AI Practice

I use AI as a working method: content workflows, automation scripts, AI-assisted web development, and education/product applications.

Entrepreneurial Proof

My personal brand, mini-program, and OPC ecosystem show that I can build from zero, reach users, collect feedback, and iterate quickly.

Communication Range

From scientific writing to international competition pitching, VIP reception leadership, and public AI salons, I practice translating complex ideas for different audiences.

My Red Bird contribution

I hope to bring a grounded builder's perspective to the 2026 theme of human-machine coexistence. My interest is not only in what AI can do technically, but in how AI changes incentives, workflows, communities, and value creation. With my background in economics, AI commercialization, and real product practice, I can contribute to Red Bird as someone who connects models with markets, research with users, and imagination with execution.
