

SELECTED WORK, NOT A RESUME EXPANSION

Research-trained AI builder with real users.

Kunqi Lin (KUNKI)
Economics undergraduate, Guangdong University of Foreign Studies

3.98 GPA / 4.0 Rank 1 / 227	SCI Q2 Co-first author Energy economics	5,000+ AI brand followers Across platforms	3,000+ Day-one opens Campus mini-program
---	---	--	--

- 01

Academic research

Critical mineral trade networks, NEV industry growth, and empirical mechanism testing.
- 02

AI competition

Low-resource language test generation system, from education pain point to business model.
- 03

AI creator brand

Audience growth, AI workflows, Tencent IMA cooperation, MCN signing, and personal website.
- 04

Product and ecosystem

Campus mini-program, automation tools, OPC collaboration model, leadership and speaking.

A portfolio about crossing the distance between analysis and adoption.

01	02	03	04
Research methods	AI-enabled tools	User growth	Human context

I do not only study technology adoption. I build small systems that let people actually use new technology.

FROM ECONOMIC QUESTION TO PUBLISHED PAPER

Critical minerals, trade networks, and new energy vehicles.

This project is the clearest evidence of my research discipline: define a real sustainability problem, translate it into measurable variables, and test the mechanism with data.

PUBLICATION EVIDENCE

How trading patterns of critical minerals affects the NEV industry? A complex network and multiple regression analysis approach

Energy for Sustainable Development, Volume 85, 2025, Article 101655
DOI: 10.1016/j.esd.2025.101655
Role: Co-first Author, student contributor

METHOD VISUAL

Question

Do global critical mineral trade positions affect NEV industry development?

Approach

Constructed a 2013-2023 trade network and tested mechanisms with econometric models.

Finding

Trade centrality promotes NEV industry growth, with technological progress as a full mediator.

MY CONTRIBUTION

- Participated in literature review, hypothesis development, variable design, empirical testing, and manuscript revision.
- Worked with global trade data and translated an industrial problem into network indicators.
- Built confidence in cross-domain research across trade, sustainability, and industrial innovation.

CAPABILITY SIGNAL

- Complex network analysis and quantitative research design.
- Econometric modeling, robustness thinking, and scientific writing.
- Ability to connect economic mechanisms with technology and sustainability policy.

AI APPLICATION WITH A REAL EDUCATION SCENARIO

Low-resource language test generation system.

The value of the project was not only model output. It was the translation from scarce teaching resources into a usable assessment workflow and a credible commercialization story.

01	02	03	04
User pain Teachers lack standardized assessment materials for low-resource languages such as Lao, Burmese, and Khmer.	AI system Generated questions, evaluated difficulty, and supported test paper construction.	Product logic Applied Item Response Theory to make difficulty more measurable and controllable.	Business route Designed individual, institutional, and data-service commercialization paths.

Gold National award in Asia Pacific ICT Competition	Bronze International competition result in Brunei	81% Reported model accuracy for low-resource languages	RMB 130K Projected first-year revenue from two enterprise clients
---	---	--	---

MY ROLE

— Led product and commercialization thinking: user scenarios, value proposition, pricing logic, and pitch structure.

— Turned technical capability into an education solution that judges could understand and users could imagine adopting.

— Helped connect the prototype with institutional demand, including GDUFS School of East Asian Languages.

WHAT THIS PROVES

I am strongest when technical teams need someone to connect model capability with a real user problem, a convincing product narrative, and a feasible business route. That is exactly the type of boundary-crossing ability Red Bird values.

Target users Teachers and students working with low-resource language learning materials.	Core value Faster generation of structured, difficulty-aware test papers.
Commercial path Membership, institutional service, and data-service cooperation.	Review focus Can the team explain both the AI system and the adoption scenario?

Technical idea + user scenario + business route.

This page is designed to show that I can sit between a model team, a user group, and a judging panel, then turn a prototype into a coherent product story.

ZERO-TO-ONE BRAND AND WORKFLOW BUILDING

A public AI brand, a working website, and repeatable content systems.

This part shows execution under ambiguity: no course assignment, no fixed brief, only a user gap around practical AI adoption and my attempt to build around it.

WEBSITE AS PUBLIC PROOF

Personal website: kunkiporfolio.site. Built as a public entry point for articles, projects, and student-oriented AI resources.

TRACTION

5,000+	Followers across WeChat Video Channel, Official Account, and Douyin.
75%	Reduction in content production time through human-AI workflows.
2	Partnership signals: Tencent IMA campus partner and AI-focused MCN contract.

COMMERCIAL LOGIC

Free content: public AI learning and tool demos

Paid community: structured guidance and peer support

Consulting: practical AI adoption help

SKILLS DEMONSTRATED

- Identified a user gap: many non-technical creators know AI matters but lack practical ways to use it.
- Designed repeatable content workflows with local knowledge bases and AI agents.
- Used AI-assisted web development to ship a site, not just describe an idea.

WeChat Video Channel
Public channel for AI content distribution.

Mini-program QR
Product evidence for the campus tool on Page 5.

SMALL PRODUCTS, REAL USERS, FAST FEEDBACK

From campus utility to collaboration ecosystem.

These projects show how I work outside a purely academic setting: identify everyday friction, launch something small, collect feedback, and connect people around opportunities.

"CHISHA!" CAMPUS MINI-PROGRAM

- Defined the core user problem: students waste attention deciding what to eat every day.
- Led product direction, launch messaging, user feedback, and merchant collaboration.
- Initial launch reached 500+ users and 3,000+ opens on day one, with a 147-member user community.

AUTOMATION TOOLS

- Xiaohongshu viral note generator: converts topic keywords into structured note drafts.
- WeChat Official Account auto-formatter: improves publication consistency through automated typography.
- These tools support my own creator workflow and lower the barrier to content production for others.

OPC ECOSYSTEM

LEADERSHIP AND SPEAKING

- Canton Fair VIP reception team leader: managed 16 volunteers serving 1,000+ international VIP buyers daily, with zero complaints.
- Guangzhou AI Creator Salon speaker: shared frameworks for local knowledge bases, AI agents, and individual competitiveness.
- Practiced translating complex ideas for both technical and non-technical audiences.

HUMAN-MACHINE COEXISTENCE, GROUNDED IN REAL SYSTEMS

Why this portfolio belongs in Red Bird.

My strongest pattern is not one isolated achievement. It is the ability to move between rigorous analysis, AI-enabled making, business reality, and human-centered communication.

Academic depth

Published SCI Q2 research, top academic ranking, and quantitative training in economics give me the discipline to ask precise questions and test claims carefully.

AI practice

I use AI as a working method: content workflows, automation scripts, AI-assisted web development, and education/product applications.

Entrepreneurial proof

My personal brand, mini-program, and OPC ecosystem show that I can build from zero, reach users, collect feedback, and iterate quickly.

Communication range

From scientific writing to international competition pitching, VIP reception leadership, and public AI salons, I practice translating ideas for different audiences.

I want to study not only what AI can do, but how AI changes incentives, workflows, communities, and value creation.

SELECTED EVIDENCE LINKS

- Publication DOI: 10.1016/j.esd.2025.101655
- Personal website: <https://kunkiporfolio.site/>
- Public AI content channel and mini-program QR codes included on Page 4.

Research-trained, user-aware, and product-minded: this is the position I hope to bring into Red Bird.
